

PRESS RELEASE

Luxembourg special fund expands European commitment

FP Lux Investments purchases nine wind turbines in Finland

Zug, 18th June 2018. Luxembourg special fund FP Lux Investments is further expanding its wind power portfolio. With the purchase of the Ratiperä wind farm in southwestern Finland, the portfolio of the Wind Infrastructure I sub-fund has grown to 19 wind farms with 94 turbines and an installed capacity of 269 megawatts. Of this, a volume of 194 megawatts was acquired in Germany, 31 megawatts in France and 44 megawatts in Finland. The deal was advised by the internationally active M&A advisors and asset manager re:cap global investors ag, which manages the entire evaluation and acquisition process of the special fund. Thomas Seibel, CEO of re:cap, says: "The Ratiperä project is a milestone for the further diversification of our European portfolio. Finland offers an extremely stable investment environment and strong growth potential, as the government is actively promoting the expansion of renewable energies through government subsidies". In concrete terms, Finnish energy production is to be increased from 4.8 terawatt hours in 2017 to 9 terawatt hours by 2025.

Ratiperä wind farm: nine turbines supply 17,000 households

The nine turbines of the Ratiperä wind farm are of the Nordex N-131 type, each with a size class of three megawatts. The hub height is 146 metres; the rotor diameter is 131 metres. With a total output of 27 megawatts, the turbines supply around 17,000 households with climate-friendly wind power and thus avoid the emission of around 20,400 tonnes of CO₂ per year. The wind farm was connected to the grid in September 2017 and was thus able to secure a state feed-in tariff guaranteed for twelve years. Vendor of the park is ABO Wind AG. The project developer will continue to be responsible for the commercial and technical management. Ratiperä is the fifth wind farm that the Wiesbaden-based company has connected to the grid in Finland. ABO Wind has installed a total of 29 turbines with a capacity of 92 megawatts in Finland to date.

Wind Infrastructure I: closing in the fourth quarter of 2018

Due to a favourable project pipeline, Wind Infrastructure I will continue to collect new investor funds until the fourth quarter of 2018. With an investment volume of over 180 million euros in equity capital, Wind Infrastructure I is one of the largest onshore wind funds in Europe. The fund was designed exclusively for institutional investors and invests directly in onshore wind projects that have already been completed or are under construction. The focus is on projects in Germany, supplemented by investments in other EU countries with favourable framework conditions, such as Finland, France, Denmark or Sweden. This makes the fund particularly interesting for security-oriented investors. Seibel: "By investing in Wind Infrastructure I, investors can participate directly in an operating asset portfolio that is diversified across Europe and thus generates stable returns even in a low-interest environment".

FP Lux Investments S.A. SICAV-SIF is a special fund solution under Luxembourg law, which is eligible for investment in collateral assets and Master-KVG (consolidated administration of funds and direct investments). As an AIFMD-compliant investment vehicle, the fund meets the regulatory requirements of almost all institutional investors. The investment volume of the fund stands at over 1 billion euros. In its sub-funds, the FP Lux Group holds wind and solar projects with a total volume in excess of 500 megawatts in Germany and Europe. The Wind Infrastructure I sub-fund is open for subscription until the fourth quarter of 2018. It targets long returns of around six per cent per year.

re:cap global investors ag

re:cap global investors is an independent, internationally-oriented M&A advisor and asset manager for renewable energies. With a specialist team consisting largely of solar and wind energy experts, it provides clients with services geared to the evaluation and selection of suitable projects. Where necessary, re:cap also acts as asset manager for the facilities, reviewing them regularly for potential process and revenue optimisation. As a boutique firm, re:cap offers first-class, high-end advice to institutional investors looking to invest in infrastructure projects in the renewable energy sector. On behalf of its clients, the consultant has already recommended and acquired over 500 megawatts of capacity from projects delivering a total capacity more than 10,000 megawatts.

About ABO Wind

ABO Wind is a successful developer of renewable energy projects. Since 1996, the Wiesbaden-based company has developed and installed around 650 wind turbines and solar power plants with a total capacity of around 1,400 megawatts across Europe. Each year, ABO Wind erects turbines with an investment volume of 300 million euros. The ABO Wind team consists of 500 skilled professionals worldwide with expertise in project planning, bank financing, construction, operational management and maintenance of farms for a sustainable energy supply.
