RE Infrastructure Opportunities portfolio reaches total capacity of almost 250 MW

re:cap advises FP Lux Investments on acquisition of 15 MWp solar park in the Netherlands

Zug, 4th November 2021. The FP Lux Group is expanding the portfolio of its third renewable energy fund RE Infrastructure Opportunities with the acquisition of a photovoltaic project in the Netherlands with a capacity of around 15 MWp. The project will supply a total of 4,800 households with renewable energy and will help save around 8,300 tonnes of CO₂ per year. The *Zonnepark 't Goy* plant is located in the municipality of Houten in the province of Utrecht. The project was connected to the grid in March 2020 and benefits from an SDE+ feed-in tariff of 117 EUR/MWh over a 15-year term.

The seller of the park is Green Future Holding BV. The transaction was managed by the internationally active investment advisor re:cap global investors ag based in Zug Switzerland.

With the acquisition of the solar park in Houten, the total amount of Dutch PV assets under re:cap's management grows to almost 200 MWp. Thomas Seibel, CEO of re:cap, says: "We are continuously expanding our commitment in the Netherlands to give our investors access to one of the most important growth markets for photovoltaic projects in Europe and to secure attractive feed-in tariffs. There are already further European projects in the pipeline for the fund, e.g. projects in France, Germany or the Netherlands. This means we can offer our investors short capital call times and invest the current investor commitments quickly."

The RE Infrastructure Opportunities was designed specifically for institutional investors and invests in various technologies such as solar, wind, hydropower and battery storage. The portfolio currently comprises a total of 30 projects across Europe with a total capacity of around 250 MW. Through technological and geographical diversification, the fund achieves a smoothed return profile at portfolio level. The current investment focus is on photovoltaics in core European markets such as Germany, Denmark, the Netherlands, France, Sweden and Spain. The target IRR of the RE Infrastructure Opportunities is seven per cent per year after costs over a remaining fund term of around 12 years. Investments are possible from one million euros.

re:cap global investors ag

re:cap global investors ag is an internationally active investment advisor for renewable energies. With a specialised team, it supports its clients in the evaluation and selection of suitable projects. Upon request, re:cap also acts as operator of the plants and regularly reviews them for process and revenue optimisation. As a boutique, re:cap offers first-class, high-quality advice to institutional investors on their investments in infrastructure projects in the renewable energy sector. Thus, more than 950 megawatts have already been recommended and acquired on behalf of clients from more than 75,000 megawatts of audited projects.

re:cap global investors ag is a member of the multi-boutique alliance FP Investment Partners, which offers institutional investors access to innovative asset managers in the areas of equities, alternatives and real assets.
