

## PRESS RELEASE

**re:cap global investors closes transaction with up to 90 MWp solar portfolio in Sweden**

### **re:cap advises FP Lux Investments fund on entry into Swedish solar market**

**Zug, 3<sup>rd</sup> March 2022.** FP Lux Group is adding up to 90 MWp of Swedish solar parks to the portfolio of its third renewable energy fund RE Infrastructure Opportunities. The purchase agreement was concluded by the internationally active investment advisor re:cap global investors ag, which is responsible for evaluating and purchasing projects for the fund. The seller is SunSpark Nordic AB, a leading Swedish developer of PV solar parks. Under the agreement, the fund will acquire the ready-to-build solar parks and provide equity financing for construction, while SunSpark Nordic will provide long-term asset management services.

The solar parks will be built over a period of up to two years, mainly in southern Sweden, as the energy demand in this region is high and new solar parks in some municipalities can contribute to more security in the local electricity supply. The search for suitable locations for the project has been largely completed; the first parks will be built in the municipalities of Olofström, Karlshamn, Ronneby and Töreboda. Thomas Seibel, CEO of re:cap, says: "Sweden is one of the most important European markets for renewable energies with a transparent regulatory system and a strongly growing demand for locally produced solar power. We are therefore pleased to expand our commitment in the region and to have gained a professional partner in SunSpark Nordic."

Pontus Ringaby, CEO of SunSpark Nordic AB, says: "We see an increasing demand for sustainable energy solutions from Swedish companies, especially the possibility of concluding electricity contracts based on solar energy is being investigated. At SunSpark, we build small-scale solar parks in many places. We have chosen that route because it is optimal for the Swedish infrastructure - we can supply solar energy in an efficient way which means that we complement local existing grids."

#### **RE Infrastructure Opportunities: diversification within renewable energies**

The RE Infrastructure Opportunities was designed specifically for institutional investors and invests in various technologies such as solar, wind, hydropower and battery storage. The portfolio currently comprises more than 35 projects with a total capacity of almost 400 MW. Through technological and geographical diversification, the fund achieves a smoothed return profile at portfolio level. The current investment focus is on photovoltaic projects in European core markets such as Germany, Denmark, the Netherlands, France, Sweden and Spain. The RE Infrastructure Opportunities target IRR is seven percent per year after costs over a remaining fund life of approximately 12 years. Investments are possible from one million euros.

#### **re:cap global investors ag**

re:cap global investors ag is an internationally active investment advisor for renewable energies. With a specialised team, it supports its clients in the evaluation and selection of suitable projects. Upon request,

re:cap also acts as operator of the plants and regularly reviews them for process and revenue optimisation. As a boutique, re:cap offers first-class, high-quality advice to institutional investors on their investments in infrastructure projects in the renewable energy sector. Thus, more than 1,000 megawatts have already been recommended and acquired on behalf of clients from more than 75,000 megawatts of audited projects.

re:cap global investors ag is a member of the multi-boutique alliance FP Investment Partners, which offers institutional investors access to innovative asset managers in the areas of equities, alternatives and real assets.
